

Ionut Bogdan Chelaru

iOS Software Engineer — Swift / UIKit | Android · JLPT N4

Padova, Italy · Open to relocation

ionutb.chelaru@gmail.com · +39 331 205 1502 · [linkedin.com/in/ionutbchelaru](https://www.linkedin.com/in/ionutbchelaru)

PROFESSIONAL SUMMARY

iOS software engineer with 6 years building Swift/UIKit applications for consumer and custom embedded devices, backed by strong cross-platform Android (Java/Kotlin) experience. Led iOS feature development and Android-to-iOS ports that reduced crash reports by 40%+ and improved App Store ratings. Deep hands-on experience with Core Bluetooth, real-time VoIP push (PushKit/CallKit), local persistence (GRDB/SQLite), and performance and stability optimization on resource-constrained hardware. JLPT N4 Japanese; open to relocation.

TECHNICAL SKILLS

iOS: Swift, UIKit, Core Bluetooth, GRDB/SQLite, PushKit/CallKit, APNs, Firebase, Xcode, Instruments, App Store distribution

Languages: Swift, Java, Kotlin, JavaScript, TypeScript, SQL, Python

Android: Android SDK, Room, Retrofit/OkHttp, Paho MQTT, Firebase (FCM, Crashlytics), Bluetooth/NFC, AOSP

Real-time / VoIP: SIP, FreeSWITCH, Linphone, SDP, RTP, MQTT

Cross-platform & Web: React Native, Electron, React, Next.js

Tools & Practices: Git, REST APIs, CI/CD, Agile/Scrum, performance profiling, pcap/Wireshark & logcat analysis, code review

PROFESSIONAL EXPERIENCE

Software Engineer — InfinitePlay S.r.l., Padova, Italy May 2020 – Present

IpDoor — SIP-based video doorbell, intercom, and access-control platform spanning iOS, Android, and desktop apps across consumer and custom embedded hardware.

iOS Development (Swift / UIKit)

- Led iOS development in Swift/UIKit and ported Android features to iOS, reducing crash reports by 40%+ and improving App Store rating and customer satisfaction.
- Implemented VoIP push via PushKit/CallKit and fixed unreliable notification delivery by resolving an APNs content-available / mutable-content interaction that caused iOS to throttle incoming-call alerts.
- Designed GRDB/SQLite persistence with a transactional cross-table sync repository, preventing data loss during domain delete and reinsert cycles.
- Integrated Core Bluetooth for device pairing and provisioning.
- Persisted critical in-memory state across app process termination using UserDefaults and Codable, reducing post-restart failures.
- Owned App Store release and distribution; improved rating through systematic bug fixes and Instruments-driven performance tuning.

Android Development (Java / Kotlin)

- Built core Android features for consumer phones and custom Rockchip-based Android 11 devices using Room, Retrofit/OkHttp, Firebase (FCM, Crashlytics), and Paho MQTT.
- Resolved ANRs and lifecycle crashes and eliminated a foreground-service kill/restart loop by restructuring service startup, improving device reliability and uptime.

Real-time Communication (SIP / VoIP)

- Built and debugged SIP/VoIP calling (Linphone) across Android, iOS, and Electron, routed through a FreeSWITCH back-to-back user agent.
- Resolved call-transfer, hold, and media-negotiation defects at the SIP and SDP signaling level using pcap/Wireshark analysis.

Embedded & AOSP

- Customized AOSP (Android 11) for embedded devices: SELinux policy fixes, Bluetooth HAL debugging, and OTA and log-filtering improvements that increased reliability.

Cross-platform & Web

- Delivered React Native and Electron features for a desktop-focused multi-platform application.
- Built and maintained a responsive Next.js/React frontend (TypeScript) with localization and cross-browser compatibility.

Engineering Practices & Infrastructure

- Maintained a shared cross-platform SDK and ran code reviews and pair-programming sessions for a clean, maintainable architecture.
- Operated self-hosted Git infrastructure (bare repos, submodules, feature-branch and squash-merge workflow) and built an S3-based diagnostic log-collection pipeline across Android, iOS, and Electron.

Machine Learning Intern — Synclab S.r.l., Padova, Italy Sep 2019 – Oct 2019

- Applied Python machine-learning techniques to medical documentation, including data preprocessing, model training, and evaluation.

PROJECTS & LEADERSHIP

Xenuss Cup — Founder & Organizer (2019–2020)

- Founded and ran a competitive esports tournament with 100+ participants over nine days, managing logistics, scheduling, and participant communication; organized a follow-up event in 2020.

EDUCATION

BSc in Computer Engineering — University of Padova, Italy (2020)

LANGUAGES

Italian (Native) · Romanian (Native) · English (B2) · Japanese (JLPT N4)
